About Me

I am a passionate MERN Stack Developer with a strong background in building scalable and dynamic web applications with a strong focus on backend development. Skilled in Node.js, Express.js, MongoDB, and API development, I specialize in building scalable, secure, and efficient server-side applications. Experienced in RESTful APIs, authentication, database management, I enjoy optimizing backend performance and solving complex problems.

PROJECTS

Admin Panel with Blog CRUD

This project is a dynamic Admin Panel for managing blog content, built using Node.js, Express.js, and EJS as the templating engine. It implements full CRUD operations (Create, Read, Update, Delete) for blog posts, along with user authentication and role-based authorization using JSON Web Tokens (JWT).

To-Do List Backend Application

Node.js | Express.js | EJS | MongoDB | Passport.js

Developed a full-featured backend for a To-Do List web app using Node.js and Express.js, with server-side rendering via EJS. Implemented user authentication and session management using Passport.js with secure password encryption. Authenticated users can create, update, and delete their personal tasks in a protected environment. Ensured secure login/signup workflows and personalized task management with MongoDB-based storage.

CERTIFICATIONS

Red and White Multimedia Education

Mern Stack Developer with

Front end - html, css, Bootstrap, jQuery

Back end - Node js , Express , MongoDB
